

Dear

for your information please note our latest product information concerning

MANIFOLD VALVE DN 100, PNEUMATICALLY OPERATED

Manifold valves bolt directly to each other, one for each compartment, to form the manifold. The upper gallery forms a 100mm diam. pipe connection a bolted-on API adaptor to the tanker pipework, so allowing completely normal bottom loading & gravity discharge of individual compartments.

A second, lower, gallery when bolted together forms a 80mm diam. pipe.

The upper gallery is drained through to the lower gallery by pneumatic operation of the piston in the manifold valve.

Specifications

- body and cover aluminium
- stainless steel spindle
- bonded viton seal
- spring steel, zinc plated
- with open/closed indicator (green/red)
- passed European CEN test for endurance to 25.000 cycles and subsequent leak test
- air pressure 600 kPa to 800 kPa to operate. Poppet lifts at 120 kPa back pressure
- manifold is drainable through bottom blank flange
- weight 8 kg each

Type : Manifold Valve DM 104

Price : A\$ 607,20 net ex-works Sydney

Delivery time : ex-stock available

On request we will send you further informations on this.
